

Company EC2 Infrastructure Guide

Reference infrastructure document for the AWS Agent RAG knowledge base.

Golden AMI

AMI Name: aws-agent-backend-image

AMI ID: ami-07e09e37b00004508

Visibility: Private

Purpose: Preferred backend image for new EC2 instances

Current Production EC2

Instance ID: i-01dce64d3090f15b9

Region: us-east-1

Instance Type: t3.micro

Operating System: Ubuntu 26.04 LTS

Public IP: 3.214.123.2

Private IP: 172.31.25.199

Elastic IP: 3.214.123.2 (aws-agent-elastic-ip)

VPC: vpc-04d0dae2636c27067

Subnet: subnet-0007bba81f7c68d85

Key Pair: aws-agent

Boot Mode: UEFI

Virtualization: HVM

vCPUs: 2

Agent Instructions

Use the custom AMI **ami-07e09e37b00004508** (aws-agent-backend-image) by default when creating backend EC2 instances unless the user specifies another AMI. Use instance type **t3.micro**, deploy in VPC **vpc-04d0dae2636c27067**, subnet **subnet-0007bba81f7c68d85**, and use the **aws-agent** key pair. If asked about the existing production server, return the configuration listed above.
